e-mail: brad.barmore@intel.com

Title of the Change: Increase Motherboard keep-out area

Specification Title and Version: CNR Specification, Version 1.0

Reason for Change:

Designs on CNR have the capability to place parts near the bottom of the card in an area near the I/O Bracket. If parts are placed in this area they may interfere with components on the motherboard. In addition, this change further updates the CNR Specification to match the PCI Local Specification Revision 2.2.

Description of Change:

Change the circled dimension shown in Figure 14 from 10,19mm [0.401 inches] to 15.38mm [0.605 inches]. This will insure that the keepout area on the motherboard is wide enough to accommodate the maximum component height on the primary side of the CNR card.
